March 2007

DEM Solutions plans broader expansion into Europe and Asian territories - *Alister Minty appointed as Non-Executive Director*

DEM Solutions, the world leading developer of discrete element modelling software solutions, has continued its drive to increase market presence in European and Asian territories with the appointment of Alister Minty to its board of directors. Minty has joined the company as the role of non-executive director.

Alister Minty brings to DEM Solutions significant experience in strategic sales, planning and business development, currently being the chairman of two technology companies and in charge of his own independent consultancy. He was previously VP Sales at IndigoVision Plc, a Business Group Manager at VLSI Vision Ltd. and an Engineering Project Manager at Racal.

Alister Minty commented,

"DEM Solutions has made aggressive inroads into the European, Japanese and US markets with their market-leading technology over the last eighteen months. This provides a significant springboard for accelerated growth moving forward. I am delighted to be joining the team"

John Favier, CEO of DEM Solutions, added,

"I am delighted to welcome Alister to our board. Alister's expertise will be important to expanding our presence in the European and Japanese regional markets at a time when the Computer Aided Engineering (CAE) market is growing at a rate of 10-15% per annum."

DEM Solution's software, EDEM, enables engineers to simulate particulate solids within their handling, processing and manufacturing operations to produce valuable information for innovation and improvement of equipment and process design. The company currently has blue chip clients in the Americas, Europe and the Far East.

EDEM also has the unique ability to couple with other CAE tools, which gives the software the power to simulate the complicated interactions between particles and other media. These CAE couplings include fluid dynamics, structural analysis, electrical and magnetic fields, chemical kinetics and rigid body dynamics.

--- END ---

About DEM Solutions Ltd

DEM Solutions is the global leader in discrete element modelling software. Its EDEM software is used to simulate particulate handling, processing and manufacturing operations in pharmaceutical, chemical, mineral and materials processing as well as oil & gas production, agricultural and construction and geo-technical engineering. EDEM provides high-resolution information on particle kinematics, momentum, heat and mass transfer in particulate flows. DEM Solutions' consultancy team works with customers to solve design and production problems by simulating and analyzing the processes at the particle scale. DEM Solutions' corporate headquarters are located in Edinburgh, UK with offices in Lebanon, NH, USA.
